

Aggression in Humans and Other Primates

In this work aggression and conflict in man and other primates are interpreted in the light of evolutionary biology and game theory models. Unit now interdisciplinary collaboration between the humanities and the natural sciences has been rare and hampered by different methodologies and terminology. Nevertheless, such cooperation is essential for elucidating the causes and consequences of aggression in humans and in explaining what shape aggression takes in particular situations. The aim of this volume is to present empirical and theoretical studies from biologists and social scientists to create an interdisciplinary framework for understanding aggression.

Abravanel's World of Torah, upon completion, will comprise a multi-volume set of Don Yitzchak Abravanel's commentary to the Five Books of Moses. This series is not a linear translation but rather a methodical, structured interpretation of Abravanel's commentary. It is designed to be read and studied independently or can be used as an excellent guide and helpful companion to the Hebrew original.

Abravanel's World of Torah: Bereshit was originally published by Torah Renaissance Press in 2012. This was followed by a Second Printing (2nd Ed.) in 2013 and a Third Printing in 2014.

Abravanel's World of Torah: Shemot Volume I covers the first six parshiyot in Sefer Shemot. This volume features a systematic translation of Abravanel's classic commentary beginning with Parashat Shemot until the end of Parashat Mishpatim, plus much more.

Abravanel's World of Torah: Shemot Volume II concludes Sefer Shemot. It features an in depth analysis of the Mishkan (Tabernacle), the Thirteen Attributes, and much more.

Vayikra is due out in the Spring of 2017.
